Admin > Fleet Documents Settings - the main screen view

Each aircraft requires specific **documents** to be operated. Most of them are mandatory (Certificate of Registration, Certificate of Airworthiness, Air Operator Certificate), some are supplementary (Certificate of Maintenance Review, Certificate of Fitness of Flight). Leon allows you to add and manage all the documents required and also add scans of paper documents.

If the aircraft document is **expired**, Leon will display a **warning** while adding the flight on the aircraft the document is issued for.

Documents definitions

Vegicani Biorie	1010	3		×
Texting	lect.	3		×

Defining new documents for fleet

Before you add any aircraft document in Leon, you need to customise the list of all fleet documents you want to use.

Go to Settings > Fleet Documents Setup and under the icon **Documents definitions** you will be able to add document name and document type.

By clicking on the icon \checkmark you can add another document. The window also allows you to change positions of documents, depending on their importance, by clicking green upward/downward arrows. Once the making of the list is finished, save changes.

Adding newly defined document to a particular tail

Next step is adding documents to a particular aircraft, which can be done when clicking on aircraft registration. When a pop-up window **Edit aircraft Documents Set** shows up tick particular documents in column **Use** and **Req** (see screenshot on the right).

To make it easier, when it comes to adding the same band of documents to **all aircraft**, you can copy documents from already set up aircraft to the one that needs to have documents added. Go to unassigned aircraft, click **Copy documents**, choose the aircraft from which the import should be done and update.

It is also possible to add fleet documents to tails marked as **not used** (in aircraft profile) - Leon shows aircraft status in a column **Status**.

'Fleet documents notifications' setup window

It is a simple feature which allows you to define one or more persons who should be notified when aircraft document is going to be **expired**.

In a field **Intervals** you can add a number of days before a document's expiry date, when emails should arrive (as many as necessary - after a comma).

Additionally, it is possible to indicate the **From:** email.

Emails available in the dropdown are either active e-mails configured in the 'Mailboxes' or 'do-not-reply@leonsoftware.com'.
