Hadid International	SASCA VIA TOTALENERGIES AVIATION US Gal: 2.5103 USD Expires: never Est. uplift cost: 2212 USD	

SAVE DELETE FLIGHT CANCEL

Fuel prices from the uploaded fuel file

Tab **FUEL** can show fuel data from uploaded files in the section OPS > Fuel Prices, as well as custom prices added there manually. The section is split into 2 parts: ADEP fuel prices & ADES fuel prices.

By default, the section is empty. To load or reload the prices, click **GET FUEL PRICES** button next to

the airport code. The currently valid prices will be loaded. To keep them on the flight, click **SAVE** button. Once saved, the prices will be kept on the flight, unless they are manually changed or reloaded.

For particular prices, each field shows details such as:

- **Fuel supplier**
- **Fuel card**
- **Price per L JET A1**
- **Currency**
- **Expiration**
- **Est. uplift cost**
- **Est. consumption cost**
- **Index**

Expiration

The expiration date will be marked with colours as below:

- Orange - when the expiration date is in the future, but is going to expire before the flight's STD
- Red - when the price has already expired

Fuel price index

It is possible to define global reference fuel price, to have a fuel price index calculated regardless of the supplier. You can set it up in OPS → Fuel Prices.

The price set up in OPS → Fuel Prices will be used to calculate the fuel price index, shown in the Fuel tab on flights in OPS, regardless of the supplier.

The index will show the difference (in percentages) between the price offered by a supplier and the reference price.

The formula is:

$$\text{PriceIndex} = (\text{OfferedPrice} - \text{ReferencePrice}) / \text{ReferencePrice} * 100\%$$

If the index is positive (the price offered is higher than the reference) the indication is red. If the difference is negative (the price offered is lower than the reference), the indication is green.

Estimated fuel cost

Estimated uplift cost

The estimated uplift cost is calculated based on fuel price, and uplift value, which is determined as:

- 'Uplift' value in the JL, if entered
- 'Block fuel' from the 'Fuel' item in the OPS checklist, minus 'Fuel remaining' from the previous leg (if available)
- 'Trip fuel' from the 'Fuel' item in the OPS checklist, if there is no 'Block fuel' entered

Estimated consumption cost

The estimated consumption cost is calculated based on fuel price and 'Trip fuel' entered in the 'Fuel' item of the OPS checklist

Base / total price

In the top-right corner of the FUEL tab you can find a switcher

BASE

TOTAL

 which allows to view either Base fuel price (excluding tax), or Total fuel price (including tax). The default setting which price should be displayed automatically can be found in a section Settings → General settings - click a drop-down **Default price type for fuel prices** and select between **total** and **base**, then save.

Favourite suppliers

Prices marked with a **star** indicate a favourite Fuel Supplier selected in the OPS → Fuel Prices section.

Showing prices on Crew Tripsheet

Also, in FUEL tab you can select which fuel price should appear on **Trip Sheet** document by marking a checkbox (the lowest price appears in tab FUEL in green).

FUEL INFO			
Airport	Card	Fuel Supplier	Price [per L]
EGGW 02-11-2015	AirBP	Signature Flight Support	0.0837 USD
LOWI 02-11-2015	WORLD FUEL SERVICES	AIR BP-A/BP PRODUCTS NORTH AMERICA INC(BP OIL CO)/	0.9882 USD

Adding custom prices

It is also possible to add a custom fuel price by clicking '+' next to the airport code - this will open a new field where you need to select fuel supplier, a fuel card, add the price and the currency. You can remove the unwanted custom fuel prices by clicking .

Fuel price notes

Notes attached in fuel files can be viewed if you hover the mouse over this icon .

It is possible to **edit the Fuel price note** in the FUEL tab. Simply click on the notepad icon and edit existing note or add a new one in the 'Edit note' pop-up window. This applies only to the notes on the edited leg

How the fuel prices work

- By default, the 'Fuel' tab is empty. Click

GET FUEL PRICES

 to get the prices
- Clicking

GET FUEL PRICES

 will load all the prices for ADEP and ADES of the flight, which are valid (not expired) at the time of clicking the button
- The prices have to be saved on the flight, to be kept. Click

SAVE

 to keep the prices on the flight

- Saved prices freeze. New files with prices uploaded OPS → Fuel prices do not update the prices on the flight
- To update the prices, click **GET FUEL PRICES**
- The price which has been changed manually and saved, will not be changed after clicking **GET FUEL PRICES**
- If the price is marked as 'Show on Trip Sheet' and saved, it will be shown in the Crew Tripsheet
- If the fuel file is deleted in OPS → Fuel Prices, the price will be kept on the flight
- The prices, after they are saved, will not disappear from past flights

Ordering fuel

It is possible to send an email with the **Fuel Order** directly from Leon to 3 suppliers: **Success Aviation, Fuel & More, Valcora, Jetex** and more.

The ordering fuel pop-up window contains two tabs:

- **NEW MESSAGE**
- **MESSAGES**

New message

The screenshot shows an email composition window titled "Send Fuel Order". It features a "NEW MESSAGE" tab and a "To" field containing "airbpoutofhours@bp.com". The "Subject" field is set to "Fuel Order Request". A large text area for the "Request" contains a detailed fuel order template with fields for flight details, fuel prices, and supplier information. At the bottom, there are "CANCEL" and "SEND" buttons.

Fuel request email window

To order fuel, simply click **ORDER** next to Leon prices in a tab FUEL and a pop-up window will appear with default content where you only need to insert the 'Reply to' email. You can also alter the text within the 'Request' and 'Footer' windows.

Email addresses to the fuel suppliers are inserted by default and they are:

- **AirBP** - AirBPOutOfHours@bp.com
- **AML Global** fuelteam@amlglobal.net
- **EUROJET** - ops@eurojet-service.com
- **FUEL AND MORE** - email based on the 'To' column in the fuel file
- **Global Fuel Service** - ops@globalfuel.eu
- **Jetex** - fueldispatch@jetex.com
- **Mixjet** - fuel@mixjet.aero
- **Nautilus** - Claudia.fucarino@nautilusaviation.com, Linda.leone@nautilusaviation.com, Nautilus24@nautilusaviation.com, and in CC: Barbara.cardella@nautilusaviation.com

- **Skyservices** - ops@skyservices.it, fuel@skyservices.it
- **WFS** - fuel24@wfscorp.com
- **Valcora** - fuel@valcora.ch

You have to insert the above details only once as the next orders will remember the input.

When ordering fuel through a tab 'FUEL' at the particular airport, Leon will show only legs to/from that airport - not all legs of the trip.

Messages

In the 'MESSAGES' tab, it is possible to preview the correspondence history.

If the [Mailbox](#) is created and the mailbox email is inserted in the 'Reply to' field, the emails sent as well as the responses should appear in this tab.
