FAA CARI-7

CARI-7 section in Leon

In addition to CARI-6, Leon now also supports a newer, more advanced version of the same system - CARI-7. Both versions remain compatible with Leon.

Detailed instructions on how to work with CARI-7 can be found under the menu REPORTS > Reports for Authorities > Export to CARI-7.

CARI-7 download and information can be found here.

To calculate cosmic radiation dose for Leon flights, export them from this page and use it as CARI input file.

Be aware that for precise calculation CARI needs **actual heliocentric potencial** that can be obtained here

The heliocentric potential enables the program to adjust for changes in galactic radiation levels that occur with changes in solar activity.

This functionality is for Windows users only
