

Assigning Crew

Change of an aircraft registration for assigned crew

Assigning Crew automatically to flights is possible by scheduling them in Crew Duties. If a duty, by definition, should be included in planning and assigned to an aircraft (by type or registration), a crew will automatically be scheduled on a flight, as per duty.

There are **2** following scenarios if changes are made to the Duty Roster:

1. **Change of the registration but the same aircraft type** - crew will remain assigned to the flight with the new aircraft registration (see a screenshot on the right).
2. **Change of the aircraft type** - crew currently assigned will be removed from the flight. If different crew have relevant duties scheduled and appropriate ratings, they will be assigned to the flight.

If there are **no duties** scheduled and the crew are already assigned to a flight, changing aircraft type will remove the crew from this flight. Changing the type of an aircraft back to the previously assigned one, will re-assign the same crew.

Changing an aircraft registration or type in a section Schedule does not result in changing duties (their types and colours) in a section Crew > Duties
