# 'Taxi out/Taxi in' in Custom Flights List report

Taxi in and Taxi Out in Custom Flights List

We have added 2 extra columns to the **Custom Flights List** report. These columns can be activated by ticking the relevant checkboxes in the 'Columns' part of the filter.

These columns are:

1. **Taxi out** - calculation based on T/O minus BLOFF.
2. **Taxi in** - calculation based on BLON minus LND.

These calculations are based solely on **Journey Log entries**. In order to display any values in the columns you need to select 'Journey Log only' as Data Source in the filter.

We have also added **Average Taxi in and Taxi out** values in the 'Summary' section. The average value calculations are based on a summary of Taxi in/out times devided by the number of flights in any given period (search criteria in the filter).

You can search for the following Taxi in/out values:

- **ADEP and ADES** - if you insert airport code in the Airport field in standard mode Leon will search Taxi in and Taxi out for this one airport
- **ADEP** - if you switch to 'toggle mode' and search by ADEP
- **ADES** - if you switch to 'toggle mode' and search by ADES
- **Route** - if you search for a specific route in 'toggle mode' in the filter
