

# Integrations

schedule  
PPS

PPS is a pc-based Flight Planning software to private and commercial business aircraft operators, regional/charter/cargo/national airlines as well as military/utility operators. PPS Flight Planning | See more

ENABLE

## Adding a login & password for the PPS integration

In this section you can set up an integration with PPS. Before enabling this option you need to contact <http://www.airsupport.dk> and request a special **login** and **password**, which then need to be inserted into Leon.

Click an icon **ENABLE** and once a pop-up window shows up click your operator code. Insert previously received login & password and save. If you don't want flights to be sent out automatically to PPS unmark a checkbox 'Auto Send'.

**We will be adding into this section more options of integrations with various softwares - this will be announced in the future release notes.**
